6

Classic Sudoku (16 points)

Write a single number from 1 to 9 in each cell so that each number appears exactly once in every row, column, and bolded 3x3 box.

The task fulfils the conditions required to break the world record.

Sequences (22 points)

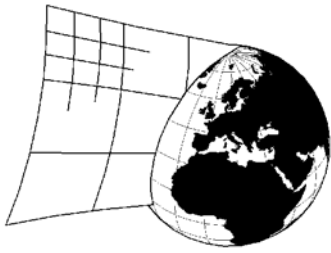

Write a single number from 1 to 9 in each cell so that each number appears exactly once in every row, column, and bolded 3x3 box. The numbers along the grey lines are arithmetic sequences (e. g. 4-5-6-7 or 5-3-1). It means that the difference between the following digits along the line is the same and the digits aren't repeated there.

6

Kropki (21 points)

Write a single number from 1 to 9 in each cell so that each number appears exactly once in every row, column, and bolded 3x3 box. The white dots indicate all the neighbouring cells in which the difference between the two cells is 1. The black dots indicate all the neighbouring cells in which one digit is the double of the other one. The dot between two cells with digits 1 and 2 has any of these two dots.

6

All-Even-All-Odd (16 points)

Write a single number from 1 to 9 in each cell so that each number appears exactly once in every row, column, and bolded 3x3 box.

Marked cells in a 3x3 box contain numbers of the same parity, either even or odd. Careful! The parity in boxes doesn't have to be the same.

Clock-Faces (32 points)

Write a single number from 1 to 9 in each cell so that each number appears exactly once in every row, column, and bolded 3x3 box.

Numbers around the white clock-face are ordered by the size in the clockwise direction. Numbers around the black clock-face are ordered by the size in the anticlockwise direction. All of the clock-faces are indicated.

More-Less Sudoku (17 points)

Write a single number 1 to 8 so that each number appears exactly once in every row and column.

In marked regions that contain more than 8 cells, there is each number at least once.

In marked regions that contain less than 8 cells, there is each number at most once.

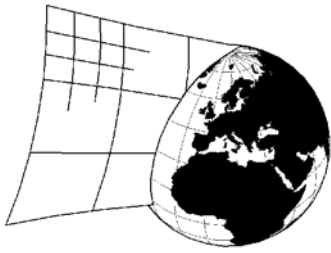

Diagram showing a 9x9 grid with numbers and marked regions. The grid contains the following numbers:

8			5		6		
		2				5	
	2		8		5		3
4				7			
			4				5
2		7		4		8	
	7				4		
		3		6			1

Marked regions are indicated by triangles with numbers:

- Triangle '1' points to the left side of the grid.
- Triangle '2' points to the top of the grid.
- Triangle '3' points to the right side of the grid.
- Triangle '4' points to the bottom of the grid.

6

Arrow Sudoku (25 points)

Write a single number from 1 to 9 in each cell so that each number appears exactly once in every row, column, and bolded 3x3 box.
Some arrows appear in the grid; the digits in the circled cells must equal the sum of all digits along the path that the arrow travels.

Little Killer (27 points)

Write a single number from 1 to 9 in each cell so that each number appears exactly once in every row, column, diagonal, and bolded 3x3 box. The values around the grid give the sums in corresponding directions. (Numbers can repeat in these sums.)

The grid is a 9x9 grid with bolded 3x3 boxes. The grid contains the following numbers:

				3				
				1				
	6	5				3	1	
				8				
				7				

Arrows and numbers around the grid indicate sums in various directions:

- Top row: 8, 7, 10, 19, 25, 34, 34, 51
- Left side (rows 1-3): 42, 27, 21
- Left side (row 4): 28
- Left side (rows 5-6): 35, 8
- Left side (rows 7-8): 13, 3
- Right side (rows 1-3): 6, 11, 10
- Right side (rows 5-6): 25, 26
- Right side (rows 7-8): 29, 32
- Bottom row: 37, 26, 36, 21, 25, 11, 11, 5
- Bottom right (rows 1-3): 44

Two large numbers with triangles indicate specific sums:

- 1 (triangle pointing right) next to row 4
- 2 (triangle pointing right) next to row 6

6

Decimal Killer (22 points)

Write a single number from 1 to 9 in each cell so that each number appears exactly once in every row, column, and bolded 3x3 box.

The value in the corner of each cage gives the sum of numbers in the cage but the last digit of the sum is hidden. (The numbers in one cage are different).
